HOSPITAL DONATION PERFORMANCE DATA AVAILABLE

TORONTO—Updated organ donation performance data for 54 designated Ontario hospitals is available today on the Trillium Gift of Life Network (TGLN) website.

In the first quarter of 2014/15, designated hospitals reported an average of 93 per cent of their potential organ and tissue donation cases to TGLN. During the same period, the donor conversion rate was 57 per cent, meaning just over half of the potential organ donors went on to save lives through organ donation.

This is the third quarterly update since Trillium Gift of Life Network began reporting notification and conversion rates by hospital. To see the data by hospital and by region:
